1. Patch April 2020

The chapter below describes changes and updates done to existing features that were made during our November patch. (Different Dapresy Pro installs were updated on different dates.)

1.1 Import Data

Edit MetaData Transformation

The change in metadata data transformation consists of data loading when Edit Meta data button clicked. This way it's possible to edit all transformation from the manual import or from the scheduled import page.

1.2 Form Report

Close Form Report

The change in the Form consists of a way the report behaves if we open it from Respondent table. Now we can close it if we click outside of the report and there is no need to use the x button to close it.
