1. Patch November 2018

The chapter below describes changes and updates done to existing features that were made during our November patch. (Different Dapresy Pro installs were updated on different dates.

1.1 Administration

Project Settings

The option to Activate in-memory storage of meta data and faster report load (faster report load times in Storyteller, Form, Cross Table 2.0) is renamed to “Use cached metadata”. The second and third in-memory function is now called “Activated cached storage”.

1.2 Storyteller

Significant test

The Significant test calculations for Mean value and moving average is changed. For example: when MA = 3 is applied each result is a representation of 3 merged nodes. But response values and respondent counts remain unchanged - meaning equal to those of the last of 3 nodes. The fix is also merge Data rows to make sure respondent counts and respondent values are fetched from all 3 nodes that were used to create one Moving Average node. This is only applied to sig test calculations when object use Mean calculation and MA > 1.

Rank value

In storyteller table when we show only rank value for no data or missing data, the table shows “-“ not 0

Invert chart

When we have an inverted chart in storyteller with show data label, the label was shown on wrong side. This is now fixed and invert chart looks is mirrored comparing to original chart.

Scatter/Bubble charts

The scatter charts logic is updated to support the sorting for answers with identical texts but different ids/blocks. The update considers 2+ answers with the same text as well.

Date limitations

The option for date limitations is added to charts, table, and dynamic icons. It is now possible to select date for future dates.

Moving Average

Option for date limitations is added to charts, table and dynamic icons, now it is possible to select date for future dates.

Translate

The files for adding translation now contain the page label found on bottom of the slide.
