Nebu – Dapresy Integration

Nebu setup

To setup the connection between Nebu and Dapresy you will need an address for the Nebu data API and an authorization token. The URL will probably be in the form of : https://companyname.nebu.com/DubPlanner - each survey in Nebu will have its' own authorization token.

The general setup of the import is the same as all scheduled imports. Please refer to general documentation regarding scheduled task setup in the Dapresy Knowledge Base portal.
