 3. Data management 17

DCM Raw data export 17

1.Introduction

This document describes new and improved features in the Forsta Visualizations 2025 June Release.

If you would like to know more about these features, please contact the support team at visualizationsSupport@forsta.com and they will be able to assist you.

Best Regards,
Forsta Team

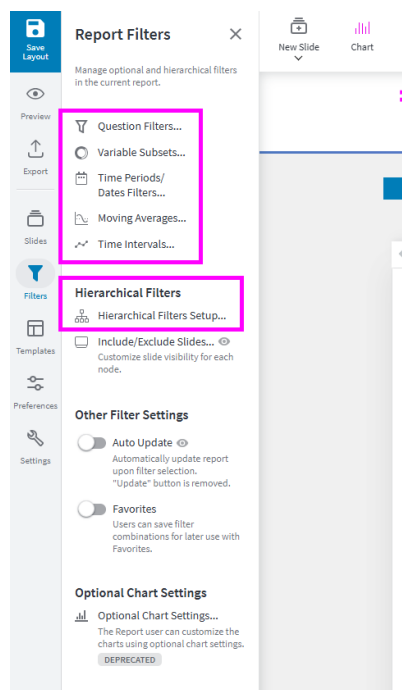

2. StoryTeller

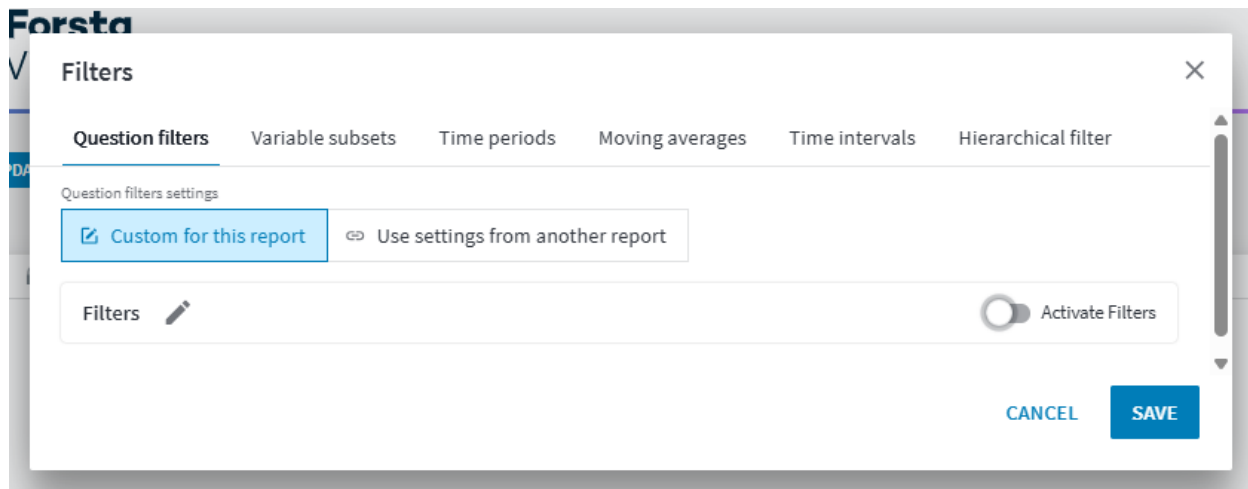

Updated user interface for Filter setup in StoryTeller

We are pleased to announce the next phase of enhancements to our StoryTeller UI, specifically focusing on the Filter setup panels. In this update, we have consolidated all optional filter options with the hierarchical filter setup screens into a single, unified location. This integration is designed to streamline the process of locating and adjusting the necessary settings. To use the new UI, enable “Use new StoryTeller setup layout” under Project settings -> Beta settings in your project.

NOTE! There are no new or removed features, but the position and/or how they look may have changed.

In the left panel, clicking on any of these links will take you to the new panel.

As seen, all options for global filters are now gathered in the same panel.

Summary object - Most mentioned topic prompt

We have now introduced the prompt to show “most mentioned topic” within our Summary object.

This enhancement allows you to view the most mentioned topics, regardless of their sentiment (positive or negative). This provides a more comprehensive overview of the topics being discussed.

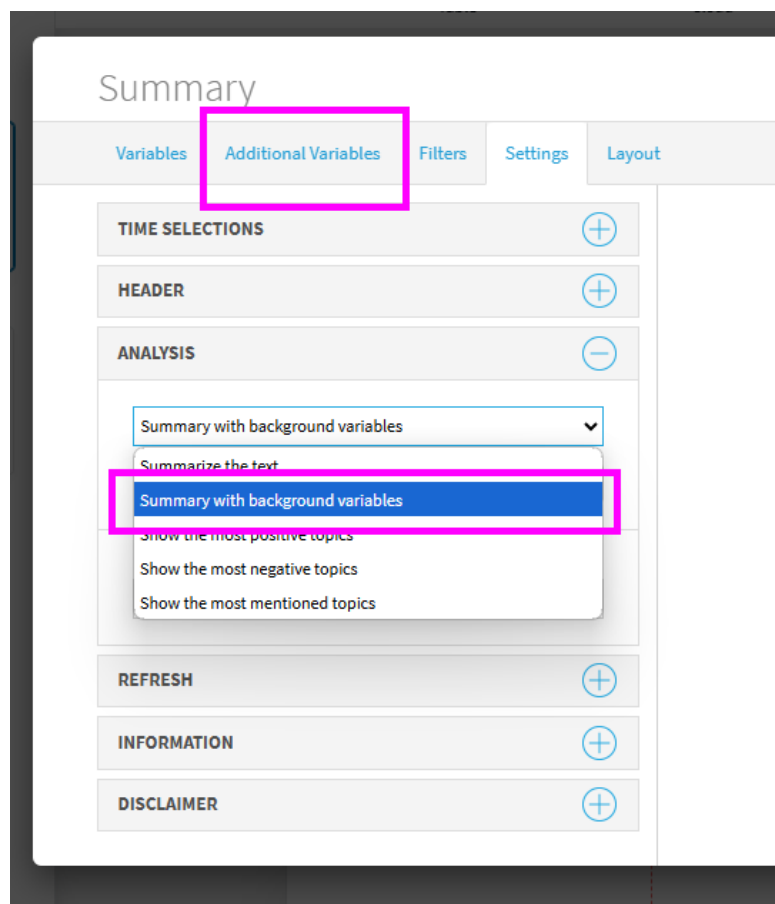

As seen here, “most mentioned” is a mix of both positive and negative topics.

Most mentioned topics	Most postive topics	Most negative topics
<div><div>1. Food Quality</div><div>2. Service Experience</div><div>3. Restaurant Cleanliness</div><div>4. Seating Comfort</div><div>5. Menu Variety</div></div> <div><div>The output provided is based on an AI-generated analysis of the comments and may not always reflect the content with complete accuracy.</div></div>	<div><div>1. Food Quality</div><div>2. Menu Variety</div><div>3. Outdoor Seating</div><div>4. Pricing</div><div>5. Staff Accommodations</div></div> <div><div>The output provided is based on an AI-generated analysis of the comments and may not always reflect the content with complete accuracy.</div></div>	<div><div>1. Service Quality</div><div>2. Cleanliness of Restaurant</div><div>3. Wait Time for Food</div><div>4. Comfort of Seating</div><div>5. Menu Pricing</div></div> <div><div>The output provided is based on an AI-generated analysis of the comments and may not always reflect the content with complete accuracy.</div></div>

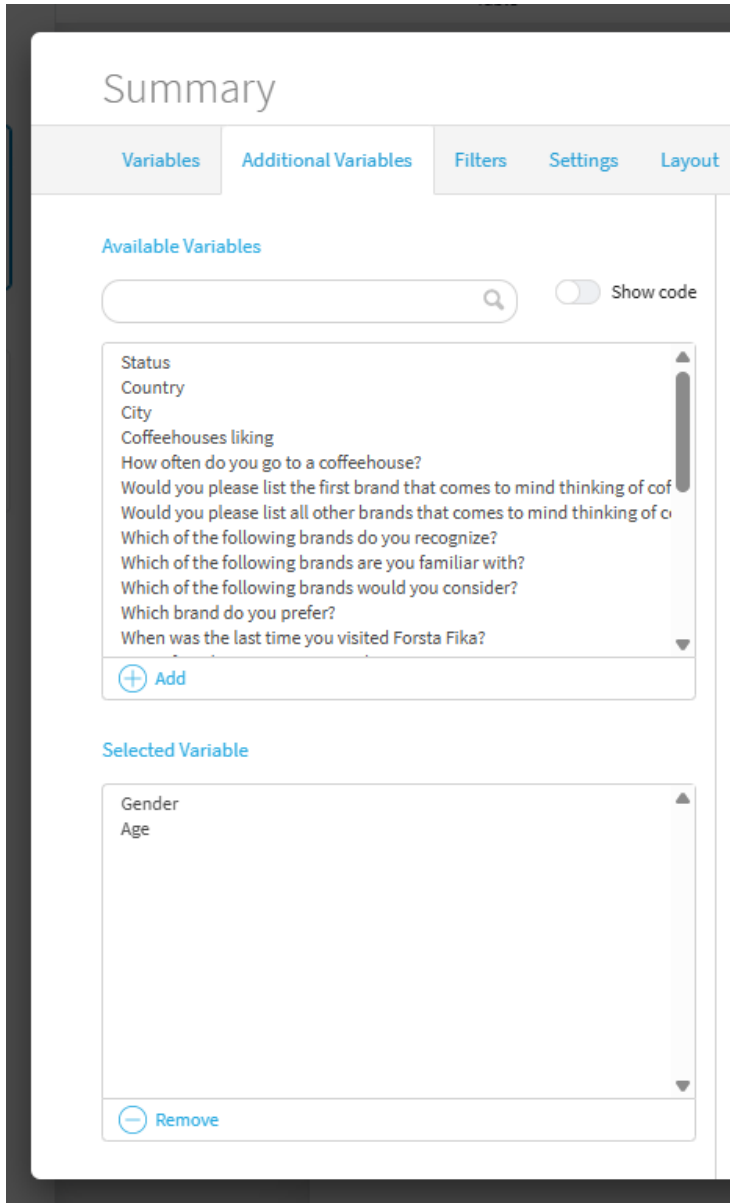

Summary object - Add categorical questions as additional information

We are now introducing a new feature within our Summary object that allows for the creation of more detailed summaries by incorporating additional questions from your survey. This enhancement enables the AI to consider various background questions, such as age, gender, brand familiarity, or any other categorical questions, providing a comprehensive summary of open-ended responses.

This is a new option in the dropdown for analysis. Once selected, a new tab will be available in the header.

The new tab allows you to include additional categorical questions. Simply mark the desired questions and click “Add” to move them to the “Selected” area.

The screenshot displays a web interface titled "Summary" with a navigation bar containing tabs: "Variables", "Additional Variables", "Filters", "Settings", and "Layout". The "Additional Variables" tab is active. Below the tabs, there is a section titled "Available Variables" with a search bar and a "Show code" toggle. A list of variables is shown, including "Status", "Country", "City", "Coffeehouses liking", and several questions about coffeehouse visits and brand preferences. An "Add" button with a plus icon is at the bottom of this list. Below the "Available Variables" section is a "Selected Variable" section containing a list with "Gender" and "Age". A "Remove" button with a minus icon is at the bottom of this section.

With this feature, the AI can generate a summary based on the selected open-ended question, enriched with demographic information such as age and gender for each respondent.

In the example below, the left Summary incorporates gender and age information for each respondent to create a tailored summary, while the right Summary represents an overview of the entire sample.

<p>What do you think about Forsta Fika? Gender and Age is added as additional variables</p>	<p>What do you think about Forsta Fika? No additional variables</p>
<p>The feedback from respondents highlights several key themes regarding their experiences at the coffeehouse. Overall, sentiments are mixed, with many praising the food quality and service while expressing concerns about cleanliness and value. Notably, younger respondents (19 or younger) frequently mentioned cleanliness issues, while older respondents (60 or older) often appreciated the atmosphere but noted high prices. Female respondents tended to emphasize the need for improved service and cleanliness more than their male counterparts. Actionable insights include enhancing cleanliness standards and reassessing pricing strategies to improve perceived value, particularly for younger patrons.</p> <p>The output provided is based on an AI-generated analysis of the comments and may not always reflect the content with complete accuracy.</p>	<p>The survey responses reveal a mixed sentiment towards the coffeehouse experience. While many customers praised the taste of the food and coffee, as well as the cleanliness and friendly service, several noted significant issues with service speed, value for money, and overall atmosphere. Cleanliness, particularly regarding glasses and floors, was frequently highlighted as needing improvement. Additionally, high prices were a common concern, leading to dissatisfaction with perceived value. Overall, while the coffeehouse has strong potential, addressing service and cleanliness issues could enhance customer satisfaction and encourage more positive recommendations.</p> <p>The output provided is based on an AI-generated analysis of the comments and may not always reflect the content with complete accuracy.</p>

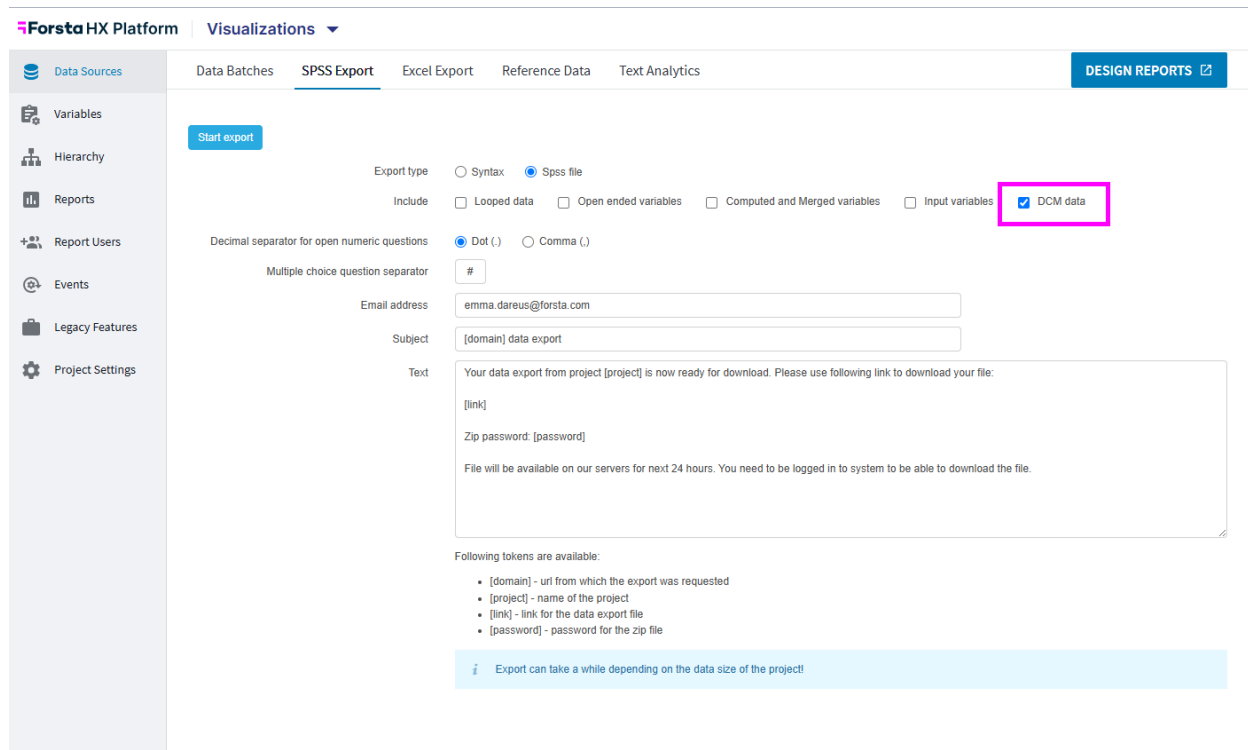

3.Data management

DCM Raw data export

We have now enabled the option to download raw data for your Discrete Choice Model (DCM) test executed in Forsta Surveys (Decipher) and imported to Forsta Visualizations.

The data can be exported both within your survey to Excel, and from your project to SPSS. The data exported to SPSS is only the respondent level raw data for level. It's the "Zeroed Utilities" that is available in Forsta Visualizations. If any additional raw data is needed, this has to be exported from Forsta Surveys (Decipher).

To export your data, enter "SPSS Export", make sure to check the box "DCM" and add all other necessary information as you normally do within an export.

The screenshot shows the 'SPSS Export' tab in the Forsta HX Platform. The interface includes a sidebar with navigation options like 'Data Sources', 'Variables', 'Hierarchy', 'Reports', 'Report Users', 'Events', 'Legacy Features', and 'Project Settings'. The main content area has a 'Start export' button and several configuration options:

- Export type:** Radio buttons for 'Syntax' and 'Spss file' (selected).
- Include:** Checkboxes for 'Looped data', 'Open ended variables', 'Computed and Merged variables', 'Input variables', and 'DCM data' (checked and highlighted with a pink box).
- Decimal separator for open numeric questions:** Radio buttons for 'Dot (.)' (selected) and 'Comma (,)'.
- Multiple choice question separator:** A text input field containing '#'.
- Email address:** A text input field containing 'emma.dareus@forsta.com'.
- Subject:** A text input field containing '[domain] data export'.
- Text:** A large text area containing instructions: 'Your data export from project [project] is now ready for download. Please use following link to download your file: [link]. Zip password: [password]. File will be available on our servers for next 24 hours. You need to be logged in to system to be able to download the file.'

Below the text area, a list of available tokens is provided:

- [domain] - url from which the export was requested
- [project] - name of the project
- [link] - link for the data export file
- [password] - password for the zip file

A light blue banner at the bottom states: 'Export can take a while depending on the data size of the project!'

In the export, you will now get 2 files, Main data and DCM data.

Name	Type	Compressed size	Password ...	Size	Ratio	Date modified
 DCMData	SPSS Statistics Data Docu...	208 KB	Yes	247 KB	16%	2025-06-16 11:29
 Main	SPSS Statistics Data Docu...	34 KB	Yes	110 KB	70%	2025-06-16 11:29

Both of the files uses the same password, which is delivered to you via email.

The questions will be named after the question code from your survey, along with the attribute name and the level name.

In the example below, Q1 is the name of the question in your survey, Brand is the attribute, and Forsta Telecom the Level.

	Name	Type	width	Decimals	Label	values	missing	Columns	Align	measure	Role
1	RespondentID	Numeric	19	0		None	None	19	Left	Unknown	Input
