Forsta Visualizations March 2025 Release 1

 1. Introduction 3

 2. Project administration 4

Email verification 4

Project archiving..... 6

1.Introduction

This document describes new and improved features in the Forsta Visualizations March 2025 Release.

If you would like to know more about these features, please contact the support team at visualizationsSupport@forsta.com and they will be able to assist you.

Best Regards,
Forsta Team

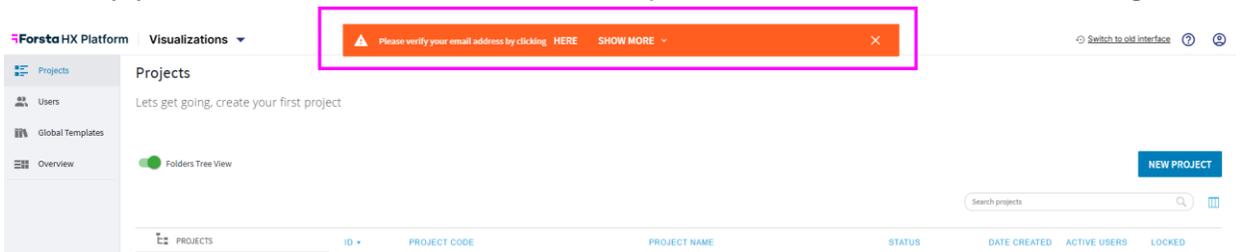

2. Project administration

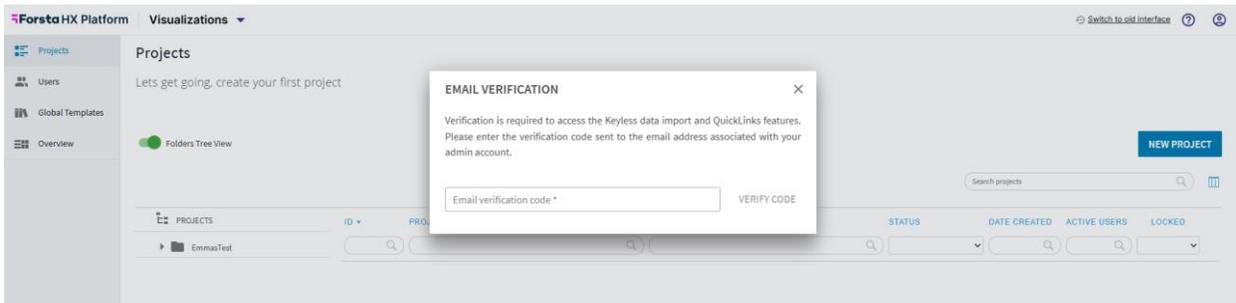

Email verification

To enable certain features within Forsta Visualizations, the email associated with your Admin account must be verified. This requirement is only applicable if the features necessitating verification are enabled on your account. While email verification is not mandatory, failure to complete it will restrict access to these additional features.

To verify your account, follow the instructions provided in the banner info message.

Clicking the verification button will send a code to the email address linked to the logged-in admin. You will then see an email verification popup.

The verification email, sent from admin@dapresy.com will contain your verification code, which is valid for 15 minutes.

Below is an example of how the email will appear.

Dear Katie Thompson,

Your verification code is: **50831413**

Please use this code to complete your email verification process.

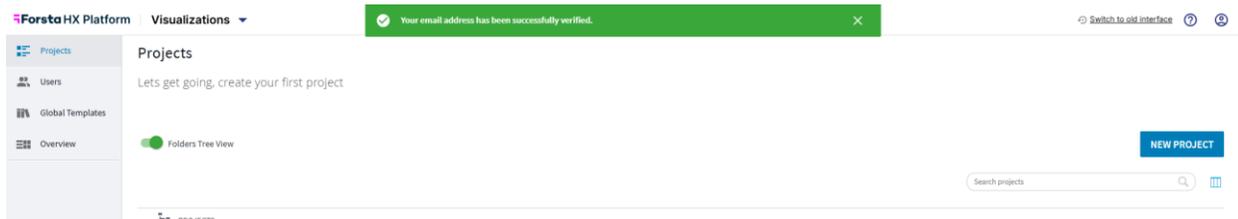

The code will expire in **15 minutes**, so make sure to enter it promptly.

If you did not request this verification code, please ignore this email.

Best regards,

Forsta Vizualizations

Once you have entered the correct code, a green "successfully verified" banner will appear at the top.

If the wrong code is entered three times, you will need to request a new verification code.

Project archiving

To maintain optimal performance for each installation, we have implemented rules for "project sleep," "project archived," and "project delete." These actions will occur automatically, with email notifications sent regarding archiving and deletion.

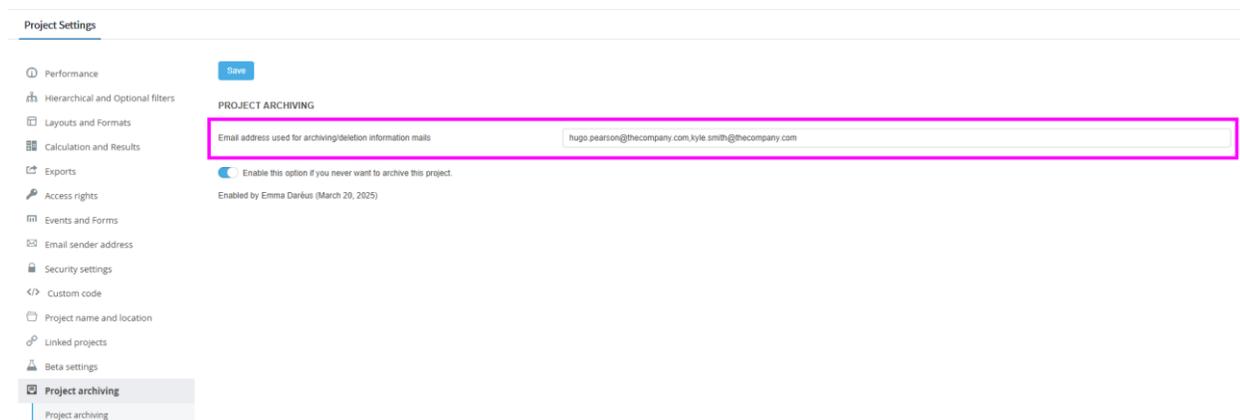

These rules are based on project inactivity. A project is considered active as long as a user or admin logs in, or if a scheduled import/export is executed.

Project sleep

After 10 days of inactivity, a project will enter Sleep mode. This conserves server resources while preserving all your data. Your project remains fully intact and will be available when reopened.

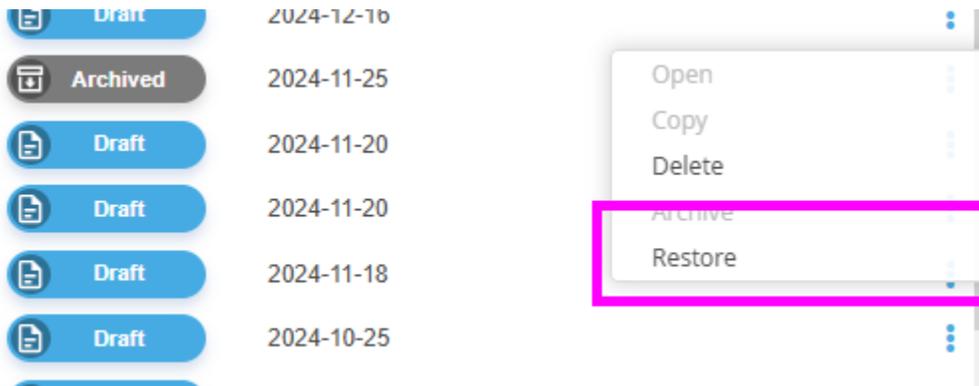

Project archiving

If a project has been inactive for six months, it will be automatically archived. One month before the expected archiving date, an email will be sent to the project creator and, additionally, all email addresses listed under "Project archiving" in Project settings.

An archived project must be restored to become available again. This can be done through the UI on your Project Selection page by clicking the three dots on the right.

For projects archived prior to 2025, report users will not be included in the restoration process. Conversely, for projects archived during or after 2025, report users and their associated settings will be restored.

Project deletion

If a project has been inactive for 15 months (nine months in archived mode and six months in sleep mode), it will be automatically deleted. One month before the expected deletion date, an email will be sent to the project creator and all email addresses listed under "Project archiving" in Project settings.

Keep project active

If you have a project that you never want to be archived, such as a demo or one with limited activity, you can disable the automatic archiving and deletion option. This setting is available under the "Project archiving" section in Project settings. When enabled, a log of who enabled it and when it was enabled will be shown.

The screenshot shows the 'Project Settings' interface. On the left is a sidebar menu with categories like Performance, Hierarchical and Optional filters, Layouts and Formats, Calculation and Results, Exports, Access rights, Events and Forms, Email sender address, Security settings, Custom code, Project name and location, Linked projects, and Beta settings. The 'Project archiving' option is selected and highlighted. The main content area is titled 'PROJECT ARCHIVING' and features a 'Save' button at the top. Below the title, there is a text input field for 'Email address used for archiving/deletion information mails' containing the email 'hugo.pearson@thecompany.com,kyle.smith@thecompany.com'. A toggle switch is currently turned on, with the text 'Enable this option if you never want to archive this project.' and a log entry 'Enabled by Emma Darfus (March 20, 2025)' below it. A pink rectangular box highlights the toggle switch and the log entry.
